SECTION E INSPECTION AND ACCEPTANCEE-6 QUALITY ASSURANCE PROVISIONSDefinitions.

(1) Critical defect. A critical defect is a defect that judgment and experience indicate would result in hazardous or unsafe conditions for individuals using, maintaining, or depending on the item; or a defect that judgment and experience indicate is likely to prevent the performance of the major end item, i.e., the consumption of the ration.

(2) Major defect. A major defect is a defect, other than critical, that is likely to result in failure, or to reduce materially the usability of the unit of product for its intended purpose.

(3) Minor defect. A minor defect is a defect that is not likely to reduce materially the usability of the unit of product for its intended purpose, or is a departure from established standards having little bearing on the effective use or operation of the unit.

Quality Assurance Provisions.

The following quality assurance criteria, utilizing ANSI/ASQC Z1.4-1993, Sampling Procedures and Tables for Inspection by Attributes, are recommended.

A. Classification of inspections. The inspection requirements specified herein are classified as follows:

(1) First article inspection. The first article shall be inspected in accordance with the provisions of this Performance-based Contract Requirements and evaluated for overall appearance and palatability. Any failure to conform to the performance requirements or any appearance or palatability failure shall be cause for rejection of the first article.

(2) Conformance inspection. Conformance inspection shall include the product examination and the methods of inspection cited in this section.

\* B. Product examination. The finished product shall be examined for compliance with the performance requirements specified in Section C of this Performance-based Contract Requirements utilizing the double sampling plans indicated in ANSI/ASQC Z1.4 - 1993. The lot size shall be expressed in pouches. The sample unit shall be the contents of one pouch. The inspection level shall be S-3 and the acceptable quality level (AQL), expressed in terms of defects per hundred units, shall be 1.5 for major defects and 4.0 for minor defects. Defects and defect classifications are listed in Table I. For drained weight inspection, a separate set of pouches shall be selected from the lot using the same sampling criteria as above. The pouches shall be immersed in 140°F to 190°F water for 10 minutes prior to the drained weight inspection.

SECTION E CONTINUED

4/ Type and size requirements for cooked spaghetti shall be verified by certificate of conformance.

5/ If the sample average net weight is less than 8.0 ounces, the lot shall be rejected.

6/ If the sample average drained weight of the beef and spaghetti is less than 5.1 ounces, the lot shall be rejected.

C. Methods of inspection.

(1) Commercial sterility. Testing for commercial sterility shall be in accordance with MIL-PRF-44073.

\* (2) Shelf life. The contractor shall provide a certificate of conformance that the product has a 3 year shelf life when stored at 80°F. Government verification may include storage for 6 months at 100°F or 36 months at 80°F. Upon completion of either storage period, the product will be subjected to a sensory evaluation panel for appearance and palatability and must receive an overall score of 5 or higher based on a 9 point hedonic scale to be considered acceptable.

(3) Net weight. The net weight of the filled and sealed pouches shall be determined by weighing each sample on a suitable scale tared with a representative empty pouch. Results shall be reported to the nearest 0.1 ounce.

(4) Drained weight. The pouch contents shall be poured into a flat-bottom container. A minimum of three times the pouch's volume of 180°F to 190°F water shall be added to the container so as to cover the contents. The contents and water shall be gently agitated so as to liquefy rendered fat and to remove the sauce without breaking the beef or the spaghetti. The contents shall then be poured into a U.S. Standard No. 20 sieve in a manner that will distribute the product over the sieve without breaking the beef or the spaghetti. The sieve area shall be such that the distributed product does not completely cover all the openings of the sieve. The sieve shall be tilted at approximately a 45° angle and allowed to drain for 2 minutes before determining the drained weight by subtracting the sieve tare weight from the gross weight. The drained weight shall be reported to the nearest 0.1 ounce.

(5) Nutrient content. The sample to be analyzed shall be a composite of eight filled and sealed pouches which have been selected at random from the lot. The composited sample shall be prepared (see NOTE) and analyzed for protein content, fat content, and salt content in accordance with the following methods of the Official Methods of Analysis of AOAC International:

<u>Test</u>	<u>Method Number</u>
Protein	984.13
Fat	960.39, 985.15
Salt	935.47

Test results shall be reported to the nearest 0.1 percent. Any result not conforming to the requirements specified in Section C of this Performance-based Contract Requirements shall be cause for rejection of the lot.

NOTE: The USDA will use AOAC method 983.18 for preparation of the sample.

TO: DSCP-HSL (Woloszyn/4435)

Subject: Document changes; PCR-S-0002 Spaghetti with Meat and Sauce, Packaged in a Flexible Pouch, Shelf Stable; Protein Requirement Deletion (DDC01-018)

1. Based on recent inquiries, the U.S. Army Soldier and Biological Chemical Command, Soldier Systems Center (SBCCOM) and COL Applewhite, Chief Dietician of the Army, have determined that, on a case-by-case basis, the protein requirement in some operational ration entrees could be eliminated. In these

instances, reliance on drained weight and other nutritional/analytical requirements was acceptable.

2. SBCCOM requests that DSCP implement the following changes to the subject document for all MRE XXI and pending procurements until the document is formally amended or revised:

In section C-2, para I (Nutrient content): Delete "(1) protein content..." entirely.

In section E-6, para C (5) Nutrient content, lines 3 and 7: delete references to "protein content" and "protein 984.13" accordingly.
